Christine Chasse Explores Future of AI in Public Health at University Event

Spencer Fane attorney Christine Chasse was a panelist for the November 10 University of North Texas (UNT) presentation, AI, Health, and Populations.

Joined by UNT faculty, Drs. Mark Albert and Bishnu Sarker, Christine explored how the health care industry currently harnesses artificial intelligence, related challenges and opportunities, and the future of this evolving technology. The panel provided information regarding the technical aspects of these technologies, along with the interplay of science, law, and frontline health care perspectives to a theater of public health and allied health students.

At Spencer Fane, Christine maintains a dual-focused practice at the intersection of cybersecurity and health care, advising clients on emerging legal risks while providing pragmatic, business-forward guidance. She supports a range of clients – from health systems to technology providers – in navigating complex regulatory frameworks, responding to high-stakes incidents, and structuring effective litigation strategies. Christine's clients benefit from her nuanced understanding of both the legal landscape and the day-to-day realities of working within a health care organization. She is a registered nurse and lawyer, and the first AIGP certified attorney at Spencer Fane. The AIGP is a certification validating the expertise of professionals overseeing AI systems that are trustworthy, transparent, and compliant with laws and regulations.
