

Christine Chasse Examines AI Bias in Health Care for American Bar Association

Spencer Fane attorney [Christine Chasse](#) presented at the April 15 meeting for the American Bar Association Tort Trial and Science & Technology Section Medicine and Law Committee. She gave the same presentation last month at a Dallas Bar Association CLE.

Her session, An Overview of Artificial Intelligence Bias in Health Care, examined a particular challenge stemming from the rise of AI: biased algorithms. Christine outlined how such bias, combined with lack of regulation, can perpetuate inequities in the health care industry and harm minority communities. She also provided tips for navigating this “brave new world.”

At the firm, Christine utilizes her extensive front-line health care experience to assess and successfully resolve professional liability claims and CMS investigations for hospital systems and providers. She also guides her clients with regulatory and compliance enforcement actions and advises on technological issues including cybersecurity, data privacy, artificial intelligence, and cyber incident response matters such as actual or potential HIPAA breaches and data security incidents.
