# Shawn Tuma Highlights His New AI Leadership Book at CISO XC Dallas

Spencer Fane attorney Shawn Tuma recently joined cybersecurity and business leaders at the October 13 CISO XC Dallas Fall Conference 2026 in Plano, Texas. During the event, he shared insights from his new book, "Leading at the Speed of AI: Leadership, Strategy, and Governance for the AI Age."

A follow-up to his previous work, "The GC+CISO Connection," the new book examines how organizational leaders can align innovation, governance, and business objectives to deploy artificial intelligence responsibly and effectively. In it, Shawn emphasizes that AI is not solely a technology issue but a leadership challenge requiring enterprise-wide engagement and decision-making.

At the conference, Shawn's presentation explored many of the themes featured in the publication, including how to align enterprise-level leadership across a business, applying and adapting the necessary frameworks, and managing the data security risks. During a networking break, attendees also had the opportunity to meet Shawn and receive signed copies of the book.

At Spencer Fane, Shawn serves as chair of the firm's AI Governance Committee and co-leads the Cyber | Data | Artificial Intelligence | Emerging Technology Practice Group. From advising on cybersecurity and data privacy matters to helping organizations develop practical AI governance programs, he works with a wide range of clients to address the legal, operational, and strategic challenges posed by emerging technologies. His decades of experience and evolving approach to law continue to make Shawn a highly sought-after thought leader, author, instructor, and analyst for the national media.
